

Friday 19 May 2023 – Afternoon GCSE (9-1) Computer Science

J277/01 Computer Systems

Time allowed: 1 hour 30 minutes

Please write clearly in black ink. Do not write in the barcodes.								
Centre number				Candidate number				
First name(s) MyCSTutor.co.uk								
Last name Computer Science Worked Solutions								
_								

INSTRUCTIONS

- Use black ink. You can use an HB pencil, but only for graphs and diagrams.
- Write your answer to each question in the space provided. If you need extra space use the lined pages at the end of this booklet. The question numbers must be clearly shown.
- · Answer all the questions.

INFORMATION

- The total mark for this paper is 80.
- The marks for each question are shown in brackets [].
- Quality of extended response will be assessed in questions marked with an asterisk (*).
- This document has 16 pages.

ADVICE

· Read each question carefully before you start your answer.

OCR is an exempt Charity

1 Computers represent dat	a III	Dillary	101111.
---------------------------	-------	---------	---------

(a)	Tick (✓)	one box to identify the statement about binary that is true.	
		Binary digits can only be the values 0, 1 and $\frac{2}{\chi}$	
		The left-most bit of a binary integer has the smallest value	
		Binary is used because computers are made of switches that can only be on or	off
		The smallest whole number that can be stored in 8 bits is the number 1 X	[1]

(b) Complete the table by writing the missing denary, 8-bit binary or hexadecimal values.

Denary	8-bit binary	Hexadecimal
7	128 64 32 16 8 4 2 1 00000111	7
49	00110001	31
102	01100110	66
244	11110100	<u>F4</u>

200000 bytes 2300 KB = 2,300,000 bytes 200 MB = 200,000,000 bytes 0.1 GB = 100,000,000 bytes (d) Tick (/) two boxes to identify the two file sizes that are equal to each other. 450000 bytes 450 KB 4.5 MB 0.45 GB (e) Complete the binary addition by adding these two 8-bit binary numbers. Show all your working. 0 1 1 1 0 0 0 1 if two 1's, put 0 and carry if three 1's, put 1 and carry if three 1's, put 1 and carry (f) Identify the binary shift that has been applied to the 8-bit binary number 10110000 to get the result 10000000. Left Shifft by 3 places	(c)	Tick (∕) on	e box to	ident	ify the	argest	file siz	e.			
200MB = 200,000,000 bytes 0.1GB = 100,000,000 bytes (d) Tick (/) two boxes to identify the two file sizes that are equal to each other. 4500000 bytes 450KB 4.5MB 0.45 GB (e) Complete the binary addition by adding these two 8-bit binary numbers. Show all your working. 11 (e) Complete the binary addition by adding these two 8-bit binary numbers. Show all your working. 11 11 11 11 11 11 11 11 11			2	000 000	bytes							
(d) Tick (//) two boxes to identify the two file sizes that are equal to each other. 4500000 bytes 450KB 4.5MB 0.45 GB (e) Complete the binary addition by adding these two 8-bit binary numbers. Show all your working. 11 (e) Title (1') two 1's, put 0 and carry if three 1's, put 1 and carry if three 1's, put 1 and carry (f) Identify the binary shift that has been applied to the 8-bit binary number 10110000 to get the result 10000000. Left Shift by 3			23	300 KB	= 2	,300	,000	byte	S			
(d) Tick (/) two boxes to identify the two file sizes that are equal to each other. 4500 000 bytes 450 KB 4.5 MB 0.45 GB (e) Complete the binary addition by adding these two 8-bit binary numbers. Show all your working. 1			20	00 MB	= 20	00,00	00,00	0 by	tes			
4500000 bytes 450KB 4.5MB 0.45 GB (e) Complete the binary addition by adding these two 8-bit binary numbers. Show all your working. 1			0.	1GB	= 10	0,00	0,000) byt	es			[1]
450 KB 4.5 MB 0.45 GB (e) Complete the binary addition by adding these two 8-bit binary numbers. Show all your working. 1	(d)	Tick (∕) tw	o boxes	s to ide	ntify th	e two f	ile size	s that a	are eqi	ual to each other.	
4.5 MB 0.45 GB (e) Complete the binary addition by adding these two 8-bit binary numbers. Show all your working. 1			4:	500 000	bytes							
(e) Complete the binary addition by adding these two 8-bit binary numbers. Show all your working. If two 1's, put 0 and carry if three 1's, put 1 and carry			4	50 KB								
(e) Complete the binary addition by adding these two 8-bit binary numbers. Show all your working. O 1 1 1 0 0 0 1 H 1 0 0 1 1 1 0 O 5 0 0 0 0 1 Identify the binary shift that has been applied to the 8-bit binary number 10110000 to get the result 10000000. Left Shift by 3 places			4.	5MB								
Show all your working. 1			0.	45 GB								[1]
(f) Identify the binary shift that has been applied to the 8-bit binary number 10110000 to get the result 10000000. Left Shift by 3 places	(e)	Comp	lete t	he bina	ry addi	tion by	adding	these	two 8-	bit bin	ary numbers.	
(f) Identify the binary shift that has been applied to the 8-bit binary number 10110000 to get the result 10000000. Left Shift by 3 places		Show	all yo	our work	ing.							
+ 1 0 0 1 1 1 0 0 1 if three 1's, put 1 and carry + 1 0 0 1 1 1 1 0 [2] (f) Identify the binary shift that has been applied to the 8-bit binary number 10110000 to get the result 10000000. Left Shift by 3 places			1	I.		4	0	0	•	4	The state of the s	
+ 1 0 0 1 1 1 0 (f) Identify the binary shift that has been applied to the 8-bit binary number 10110000 to get the result 10000000. Left Shift by 3 places			U	1	1	1	U	U	U	1	•	
(f) Identify the binary shift that has been applied to the 8-bit binary number 10110000 to get the result 10000000. Left Shift by 3 places		_	4	0	0	4	4	4	4	0		
(f) Identify the binary shift that has been applied to the 8-bit binary number 10110000 to get the result 10000000. Left Shift by 3 places		+	1	U	<u>U</u>	1	1	1	1	<u>U</u>		
(f) Identify the binary shift that has been applied to the 8-bit binary number 10110000 to get the result 10000000. Left Shift by 3 places		(1)	0	۵	Ď	0]				
result 10000000. Left Shift by 3 places												[2]
Left Shift by 3 places	(f)				shift th	at has	been a	pplied	to the	8-bit bi	nary number 10110000 to get the	he
places		resuit_	1000	0000.		Lef	t Shif	t by :	3			
								.:J\				 [2]

- 2 A student is performing a range of actions on the internet using their computer.
 - (a) A range of protocols are used for the transmission of data by the student's computer, and the web servers they are accessing.
 - Complete the table by identifying the most appropriate protocol for each of the tasks the student is performing.

Task	Protocol
Requesting to view a news webpage from a web server	HTTP
Entering a username and password to access their bank account	HTTPS
Downloading a text document from a web server	НТТР
Checking for new emails in their inbox	IMAP

[4]

Give two reasons why protocols have layers.
1
Separates tasks so they can operate independently
Each layer is independent - doesn't depend on each other
[2

(i)	One of	charact	eristic	ot a	LAN	IS	that '	they	are	set u	p over	a sma	l geog	grap	hical	area	ì

Give **one** other characteristic of a LAN.

..... Uses dedicated hardware[1]

(ii)	Describe the benefits of the student changing their home LAN to include wireless connections.	
	Easy to set up	
	Devices can move around - not restricted to wire	
	No trip hazard of wires	
	Cheaper to set up -less hardware	
		[4]
(iii)	State two drawbacks of changing their home LAN to include wireless connections.	
	1interference may occur	
	less stable connection	
		 [2]

- 3 Binary numbers can represent different forms of data.
 - (a) One form of data is characters.

Complete the description of how computers represent characters in binary using the given list of terms. Not all terms will be used.

2	4	8/	9	16	32	256	
71	72	74	76	78	80	81	
all	different	identical	one	repeated	similar	some	unique

A character set stores	of the characters that the computer can
represent. Each character is given aunique	binary code. Lower-case and
upper-case letters in a character set are given	different binary codes.
One example of a character set is ASCII. This cha	racter set uses8
bits for each character. If the code value for the c	haracter 'F' is 70 then the code value for
the character 'L' is	[5]
	[~]

(b) Binary numbers can also represent images.

The table shows the colours that are used in an image and the binary value for each colour.

Colour	Binary value
Red	0000
Green	0010
Blue	1000
Purple	0110

The metadata states that the image is 3 pixels wide by 4 pixels high.

The data in the file starts in the top left of the image and goes from left-to-right, top-to-bottom.

(i)	State what is meant by metadata in an image file.			
	Data about data	 [1]		

(ii) The binary data stored for the image is given:

A grid is given for the image. Each square is one pixel.

Write the name of the colour in each square that the pixel will show for this image.

red	red	Purple
plue	g cela	b lue
Purple	Purple	pur/le
red	JCLIO	blue

(iii)	A colour depth of 4 is used. This means 4 bits are used to store the colour for each pixel.
	State the maximum number of different colours that can be represented in 4-bits.
(iv)	The colour depth is increased to 2 bytes.
	State two effects that this change can have on the image. greater range of colours can be represented 1
	image file size increases

[2]

Turn over

[2]

(c)	A st	tudent has a text document and an image file that need to be compressed separately.
	The	e student needs to reduce the file size of both of these files as much as possible.
	(i)	Identify the most suitable type of compression for the text document. Justify your choice. Type of compression
		We will not lose any data - the original text file can be recovered If some data is lost, text file may be completely incomprehensable
		[3]
	(ii)	Identify the most suitable type of compression for the image file. Justify your choice. Lossy Type of compression
		Justification File size will lose quality - may not be noticed File size will significantly reduce
		[3]

4 (a) Tick (✓) one or more boxes on each row to identify all of the methods that can help to prevent each threat.

Threat	Anti-malware	Penetration testing	Encryption	Firewall
Spyware				
Brute-force attack				
Data interception				
SQL injection				

[4]

(b)	Name and describe one threat to a computer system that is not given in question 4(a). Phishing Threat	
ı	DescriptionFake email sent to person - personal information can be compromised	

5 An artist has a computer that they use to create images.

Their computer has both hardware and software.

- (a) The hardware includes primary and secondary storage.
 - (i) Explain why a computer needs both primary **and** secondary storage.

Nee	ed primary to store instructions that are essential to computer eg BIOS
Sed	condary to store files/data permanently
	[2]
(ii)	Give one example of a <u>secondary storage</u> device that the artist's computer will have and an example of the data that will be stored on it. SSD Secondary storage device
	Example data

(iii) The computer has Virtual Memory (VM).

The table has four statements about VM. Not all of the statements are correct.

Tick (✓) the **True** column for the statements that are correct.

Re-write any statement that is incorrect in the **False** column by changing the statement to make it true.

Statement	True (✔)	False – rewrite the statement to make it true
A section of primary storage is partitioned to act as virtual memory		Section of SECONDARY storage is partitioned
Data from ROM is transferred into VM		Data from RAM is transferred into VM
VM is needed when RAM is full, or nearly full	$\sqrt{}$	
Data from VM is transferred back to secondary storage when needed		Data from VM is transferred back to RAM when needed

		12	
(d)	The	e artist is working with a programmer on the development of a new piece of software.	
	The	e software will allow users to edit images on devices such as mobile telephones.	
	The	ey are considering releasing the software as open source instead of proprietary.	
	(i)	Describe two benefits to the artist and programmer of releasing the software as proprietary.	
		1Can earn money by using licenses to stop unauthorised use - sell software for a fee	
		2	
			[4]
	(ii)	Describe one benefit to the users of releasing the software as open source.	
		Users do not have to pay, can redistribute the software + edit	
			[2]

6* A shopping centre has a security system that includes CCTV cameras to record activities in the centre. The security system is being upgraded to include the use of facial recognition to identify, track the movements of and record individuals throughout the shopping centre.

Discuss the positive and negative impacts of this upgrade including:

- ethical issues
- privacy issues
- legal issues

LEGAL ISSUES:
Need to follow data protection act or company can be fined
Customers must be informed of the system
Data must be kept secure
Could be used to identify crimes being commited within the shop eg theft or assault
PRIVACY ISSUES
Customers may feel it is an invasion of privacy
Public property- can be legally recorded
Customers may not have knowledge of the system
ETHICAL ISSUES
Users feel safer - action will be taken if there is misbehaviour
Users may feel unsafe because they may feel they are being watched
Users may be unaware they are recorded - need to be informed
Users should not be impacted by the recording if they are not doing anything wrong

		. [8]
7	A car comes with many embedded systems, for example parking sensors.	
	Identify one other embedded system that could be found in a car and explain why this is an embedded system. GPS // satnav	
	Example embedded system	
	Explanation	
	Dedicated microprocessor calculating routes and location	
		[3]
